

Nancy Powell

Design your Own Technology Workshop

Begin Digital Work in your Classroom

Impact student learning at all grade levels (Pre K-12) by designing learning environments in which **technology encourages students to work harder and enjoy learning more**. Motivate even your most unmotivated students by having them use technology effectively and efficiently, think critically, solve authentic problems, and produce professional looking papers, web pages, projects, and graphics.

Nancy Powell has been working with teachers, students, and technology on the Web *since 1993*. Her expertise can equip your teachers with new technology skills and ways to incorporate technology into your curriculum.

Challenge, excite, and engage your teachers with technology expertise to prepare their students to enter the digital world. Customize this workshop to the needs and technological sophistication of your school or district. *You* choose the topics based on *your* curricular needs and *your* available technology.

Let technology be the catalyst to empower teachers and students to work smarter and add new excitement to their learning!

Word Processing

- Basic word processing skills
- Art, charts, tables, and graphs
- Web page production

Accessing Global Information
